

Ethan Langley

Savannah, GA 31419 | +1-912-472-8079 | Ethan.langley.dev@gmail.com | [LinkedIn](#)

Professional Summary

Staff-level data integration engineer specializing in cloud-native applications and scalable data pipelines. Successfully architected robust Snowflake pipelines processing 12 GB/day and played a critical role in reducing query latency by 40% through CI/CD optimizations. Demonstrated ability in mentoring junior engineers and integrating cross-functional data solutions impacting retail locations and enterprise analytics. Prepared to leverage these technical competencies and leadership capabilities to elevate data-driven decision making and performance in target operations.

Technical Skills

- Python (Pandas, NumPy), Django, Flask, FastAPI, React/TypeScript, Snowflake, PostgreSQL Azure ADF, Power BI, AWS, Lambda, S3, DynamoDB, Airflow, Docker, Kubernetes, GitHub Actions, Terraform, MLflow, dbt

Work Experience

Parkers Kitchen

Nov 2024 - Present

Data Integration Engineer

Savannah GA

- Enhanced Azure Data Factory pipelines to automate the ingestion of ~12GB/day of SOCi social-media project and POS feed data into Snowflake, achieving a 99.9% SLA and boosting data processing efficiency.
- Authored dbt models and Snowflake tasks to transform raw data into analytics marts powering 40+ Power BI reports; reporting latency cut from 8 hours to just under 2.
- Implemented Snowflake cost-governance scripts (Python) and resource monitors, reducing warehouse spend 22 %.
- Partnered with Loss-Prevention & Marketing teams to define data contracts and self-serve query patterns, slashing ad-hoc ticket volume by 35 %.
- Collaborated with third-party vendors to integrate daily data feeds via RESTful APIs and encrypted SFTP file drops-onboarded 8 external feeds in 3 months while enforcing schema validation and SOC 2 encryption standards.

Parkers Kitchen

Jul 2023 - Nov 2024

Software Engineer 1

Savannah GA

- Developed and maintained scalable software solutions for internal business processes, optimizing inventory management, sales analytics, and reporting systems.
- Designed and implemented RESTful APIs to streamline data exchange between systems, improving efficiency in operational workflows.
- Integrated third-party services (e.g., payment gateways, cloud-based analytics, and automation tools) into existing applications to enhance functionality.
- Collaborated with cross-functional teams including product managers, QA engineers, and business stakeholders to deliver high-impact features.
- Optimized database performance by restructuring queries and implementing indexing strategies, reducing query execution time by 40%.

Orion Intelligence Systems

Nov 2024 - Present

Lead Product Engineer

Minneapolis MN

- Lead the architecture and development of AI-powered solutions, integrating machine learning models and data analytics pipelines to enhance predictive capabilities.
- Manage a small team of developers to implement full-stack solutions, leveraging React, Django, and PostgreSQL to build enterprise-grade applications.
- Designed cloud-native applications using AWS services (Lambda, S3, DynamoDB), ensuring scalability and high availability.
- Automated CI/CD pipelines to improve deployment efficiency, reducing release cycles from weekly to daily deployments.
- Collaborated with stakeholders to define product roadmaps, prioritizing features based on user feedback and business objectives.

TC Energy

May 2022 - Dec 2022

Application Developer Intern

Charleston WV

- Developed internal applications to support energy infrastructure management, improving workflow automation.
- Created data visualizations and dashboards using Tableau and SQL, allowing executives to track key performance indicators (KPIs) in real time.
- Optimized legacy codebases, refactoring Python scripts and SQL queries to improve system performance by 30%.
- Assisted in cloud migration projects, helping to transition applications from on-premises servers to AWS.

Freelance Software Engineer

Feb 2022 - Jul 2023

Full Stack Engineer

Charleston WV

- Designed, developed, and deployed web applications for clients across e-commerce, healthcare, and logistics industries.
- Built custom solutions using Python, Django, and React, ensuring performance, security, and scalability.
- Integrated payment processing systems (Stripe, PayPal) and implemented authentication using OAuth and JWT.

- Optimized SEO and performance for client websites, achieving a 30% improvement in search rankings.
- Provided technical consultation and troubleshooting, assisting businesses in digitizing operations and automating workflows.

Education

Marshall Univ.

B.S., Computer Science & Cybersecurity

2023

Certifications

- SnowPro Core Certified (2025)
- Microsoft Certified: Azure Developer Associate - AZ-204 (2025)
